

# THERMOGRAPHIC INSPECTION

## OVERVIEW

Avoid costly issues with an AIMM Services Thermographic Inspection. Our Level II Certified Thermographers use high-resolution thermal imaging cameras to perform an inspection and provide a report that identifies problems that can lead to downtime, risk of fire and safety hazards, and other issues that can drastically impact your bottom line.

## BENEFITS

Regular thermography inspections of your electrical assets will allow you to identify potential problems before they become a costly concern for your business.

- ✓ Identify issues that will lead to equipment failure before it causes downtime and affects production costs.
- ✓ Reduce risk of fire and safety hazards due to overheating.
- ✓ Save on maintenance work and hours - predictive maintenance takes far less time than reactive maintenance.
- ✓ Extend equipment life by spotting problems before they lead to equipment failure.

## EQUIPMENT INSPECTED\*

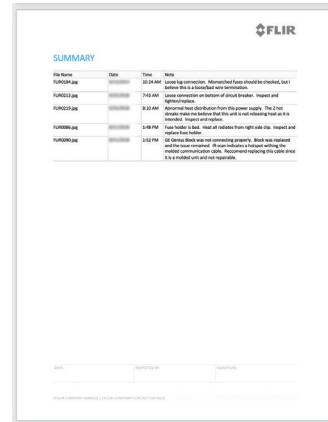

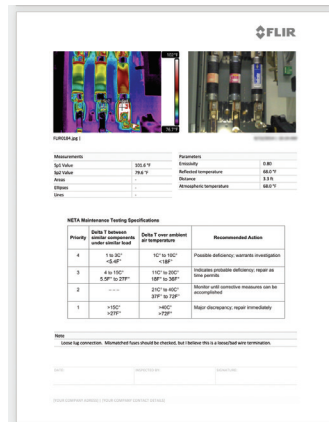

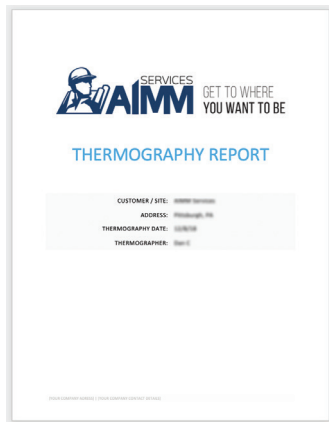

- Control Panels
- Drives
- Motors
- Disconnects
- Power Distribution Equipment
- Transformers
- Breakers
- Fuses
- Terminations
- Motor Control Centers

\*If you do not see an item you would like inspected on the list please contact your local AIMM Services representative.

## STATEMENT OF WORK

As part of the Thermographic Inspection service our Level II Certified Thermographer will perform the following tasks:

- Perform a comprehensive thermographic inspection/assessment that includes inspecting core equipment, looking for vulnerabilities, risks and probable points of failure
- Label the equipment inspected with a service sticker that lists date of inspection, service technician name and the recommended next date of inspection
- Provide a detailed report that includes:
  - Detailed key findings
  - Visual pictures and thermogram
  - Strategic recommendations

## HOW TO ORDER SERVICE
