

Start-up Assistance

Help ensure on-time production and increase your speed to market

Benefits

- Helps ensure on-time production
- Improved equipment operation
- Reduced risk of performance problems and premature equipment failures
- Reduced total maintenance costs

Ensure equipment performance beyond the initial start-up.

Our highly experienced Field Service Professionals work with you to check all equipment and systems, helping ensure equipment will perform safely, efficiently and as designed.

Improve Your Equipment Operation

Getting new equipment up and running on time is critical to the growth of your business. Start-up delays can limit productivity, which can lead to missed delivery times and loss of revenue. Additionally, improper equipment commissioning due to lack of knowledge or skill gaps can create production problems down the road. With assistance from Rockwell Automation on commissioning and start-up of your new equipment, you will get the help you need to meet your ontime production demands.

Leverage our extensive product knowledge and industry experience to help you commission and start-up your new equipment, and in turn, reduce the time between integration and actual start-up.

To improve your equipment operation, and help reduce the risk of performance problems and premature equipment failures, our start-up services can apply a standard process. This process validates that the necessary electrical, mechanical and environmental criteria have been met and the appropriate steps have been taken to ensure proper equipment operation.

LISTEN.
THINK.
SOLVE.

Typical tasks performed to meet your scheduled production on-line date

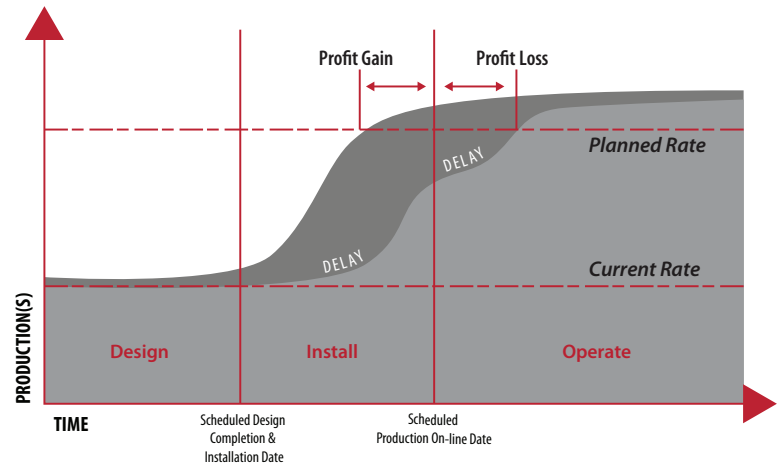

- Physical inspection and verification of proper drive and motor installation practices prior to the application of power
- Verification of external control wiring
- Confirmation of drive cabling to motor, line feed, isolation transformer (if applicable)
- Incoming line and drive output grounding checks
- Voltage application, checkout, calibration, and testing of the drive as appropriate for the application
- Adjustment of operation parameters, within drive and motor design limitations, to values as appropriate for the application
- Operation of drive through speed range to verify proper performance
- Loading of network parameters in the drive
- Documentation of drive and motor nameplate information, application information, drive settings, and operating parameters

If you need more than just start-up assistance

Rockwell Automation offers turnkey commissioning and conversion services. Contact your local authorized Allen-Bradley® distributor or Rockwell Automation sales office.
