

SAFETY

An arc flash incident occurs every 30 minutes in the United States. Are you prepared?

Contact AIMM Services to schedule your arc flash study today.

ASK YOURSELF

- Are you aware that as of January 1, 2021 NFPA 70E® will require an arc flash analysis every three years? (the current standard is every five years or when changes occur in the electrical distribution system that could affect the results of the analysis)
- Are you confident that your employees and contractors are adequately protected from the dangers of arc flash?

LET US HELP

An arc flash risk assessment calculates the incident energy generated during an electric arc flash event based on the parameters of the electrical system. AIMM Services will work with you to ensure your facility is safe for your employees and complies with regulations.

BENEFITS

- ✓ Ensure that your employees and contractors are safe
- ✓ Comply with OSHA employee hazard protection and NFPA 70E® regulations
- ✓ Make your safety vision a reality

**ARC FLASH
STUDY**

WHAT TO EXPECT

On the first visit to your facility our AIMM Services technician will walk through your facility and perform a visual inspection to calculate the number of points that will need to be included in your arc flash study.

A qualified technician or engineer will then visit your facility and do a thorough study to document every electrical apparatus within your facility and perform calculations to identify available fault current and incident energy.

The amount of time an arc flash study takes to complete depends on the number of inspection points. Upon completion of the arc flash study you will receive a one line diagram of your facility's power structure as well as arc flash labels that designate the appropriate personal protective equipment (PPE) that should be worn near your electrical equipment.

NEXT STEP

To receive more information or to sign up for an arc flash study contact your local Industrial Solutions Network location or AIMM Services Representative.
